

Texas Hold'em

42Heilbronn x TUM Workshop

Chair of Business Analytics

TUM Campus Heilbronn

Bet on yourself. Gain knowledge & meet new people!

TUM

42HN

The 42 Way

Peer-to-Peer

Your classmates are your best teachers

Self-Paced

Go as fast or slow as you need

Learning by Doing

You build it, you understand it

No Lectures

No one hands you the answers

Own Your Progress

You are responsible for what you learn

Fail Forward

Bugs are not setbacks, they are the lesson

Today's Schedule

● 8:30

Kick-off

Workshop intro, get your repo, say hi to your neighbours

● 9:00 – 11:30

Workstations

Work through all 6 workstations at 25 minutes each

● 11:30-12:00

Teambuilding, checkpoint & next steps

cards, player, table, evaluator, ui, game

● 3rd June from 14:00

Demo Day

Show your game live, walk us through your code

The 6 Workstations

Build module by module, like cards building a hand.

01

cards.py

Deck, Card, suits, ranks, shuffle

02

player.py

Player state, chips, hole cards

03

table.py

Community cards, pot, rounds

04

evaluator.py

Hand rankings, winner logic

05

ui.py

CLI display, prompts, visuals

06

game.py

Full game loop, ties it all together

Make It Yours

Base game done? Now raise the stakes.

- Custom ASCII art and card visuals
- Smarter bot AI, or RL agents that learn to play
- Monte Carlo hand probability calculator
- Multiplayer over a network
- Hand history logging and stats dashboard
- Tournament mode with multiple rounds
- GUI or web version
- Bluff detection and bet-sizing logic
- Sound effects or terminal animations
- Leaderboard system
- Anything creative you can dream up
- Matplotlib for probability

Stuck? Here's the Order

Do not fold yet. Try these before going to AI.

1

Person to your LEFT

They might have just fixed that exact thing

2

Person to your RIGHT

Fresh eyes catch what you have been staring past

3

Google it

Stack Overflow, docs, tutorials, they exist for a reason

4

AI Tools

Last resort, not first. Use it to unblock yourself, not to skip

AI Tools Policy

Allowed

- Unblock yourself on a tricky bug
- Understand a concept more clearly
- Debug and reason through errors
- Get ideas you can run with yourself

Avoid

- Prompting full solutions to paste in
- Submitting code you cannot explain
- Using it instead of thinking
- Skipping the struggle (that is the point)

Golden Rule: You should be able to explain every single line of your code.

Demo Day

14:00 until 17:00 · Show us what you built.

Show it running

Live demo of your CLI game. Let us play a hand.

Walk us through it

Pick one module and explain how it works in your own words.

What was hardest?

Share the bug that nearly broke you. We have all been there.

What is next?

If you had two more days, what would you build first?

No pressure. Just show what you are proud of.

After 12:00

You have earned your freedom. Here is your deal:

Stay here

Keep working in the room. We will be around if you need us.

Go team somewhere else

Take your crew, find a table, keep the momentum going.

Take a break

Rest is part of learning. Come back fresh for Demo Day.

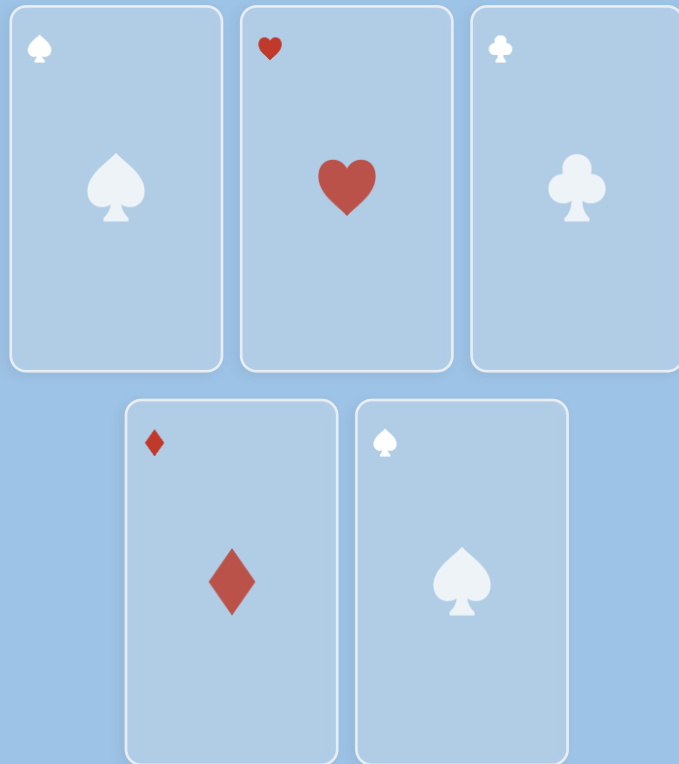

It is your time. You are in control.

Good luck.

(Not that you will need it.)

- ♠ Be curious. The best bugs teach the most.
- ♥ Help each other. That is the whole point.
- ♣ Build something you are proud to show.
- ♦ Have fun. Seriously, this is the good stuff.

The most important thing is not the code.
